- late exceedance, raw values were not found to be in exceedance in real time, and/or were not reported, but final values were found to be an exceedance after data processing.
- exc exceedance, raw values reported in real time were confirmed to be in exceedance after data processing.
- nae not an exceedance, raw values reported in real time were found not in exceedance after data processing.
- ret retracted, reported exceedance was found to be not an exceedance after investigation of measurement system status and/or validation of raw data in conjunction with all associated measurement parameters.

1.1 Data Processing and Validation

Concentrations reported in near real-time were raw values. The final values were determined after processing of data for reporting. For all parameters except PM_{2.5}, the final 5-minute data values were determined by subtracting from the raw 5-minute data values, the daily zero responses interpolated to the time of each raw 5-minute value. The final 5-minute data values were then rounded to one decimal place greater than the reporting precision indicated in the Air Monitoring Directive (AMD). The final 1-hour data values were calculated from final 5-minute data values and then rounded to reporting precision. The final 24-hour data values were calculated from final 1-hour values.

After data processing and validation, NO₂ concentrations were re-calculated from baseline-corrected NO_x and NO concentrations. Specifically, the NO concentration was subtracted from the NO_x concentration to determine the NO₂ concentration. In cases where the NO_x and/or NO values exceeded the operating range of the analyzer, values reported for NO₂ were determined as the largest of either the difference between baseline-corrected NO_x and NO values, or the NO₂ value reported by the data acquisition system with baseline correction applied.

1.2 Revisions to AEP Airdata Warehouse

There were no revisions to historical data stored at the AEP Airdata Warehouse with this monthly report.

2.0 Operational Status

Continuous Monitoring

In January 2017, there was 1 incident resulting in compliance monitoring instruments operating less than 90% of the time:

The 20m elevation wind speed, wind direction, and vertical wind speed sensors at Mannix AMS operated less than 90% of the time in January 2017, which is a violation of the Air Monitoring Directive (1989, as amended), Chapter 6, Clause DQ 4-C. Flat-line periods in the sensors' output signals were attributed to ice build-up on the sonic sensors, and data from these periods were invalidated.

During the data validation process, wind speed, wind direction, and vertical wind speed data at Mannix AMS were invalidated for a total of 150 hours, resulting in a monthly operational time of 80% for the month of January 2017. This incident was reported to Alberta Environment and Parks on February 8, 2017 (AEP Reference #320819).

In January 2017, there were 7 incidents of a monitoring instrument not required for air quality compliance operating less than 90% of the time:

1. The 100m meteorological sensors at Lower Camp Met Tower (AMS 3) had 171 hours of invalid data due to freezing temperatures and ice build-up.
2. The 167m meteorological sensors at Lower Camp Met Tower (AMS 3) had 259 hours of invalid data due to freezing temperatures and ice build-up.
3. The 45m meteorological sensors at Mannix (AMS 5) had 233 hours of invalid data due to freezing temperatures and ice build-up.
4. The 75m meteorological sensors at Mannix (AMS 5) had 246 hours of invalid data due to freezing temperatures and ice build-up.
5. The 90m meteorological sensors at Mannix (AMS 5) had 188 hours of invalid data due to freezing temperatures and ice build-up.
6. The precipitation collector at Fort Chipewyan (AMS 8) had 744 hours of invalid data due to sensor failure discovered during a routine function check. The unit was repaired in-shop and returned to site on February 9, 2017.
7. The precipitation collector at Wapasu (AMS 17) had 429 hours of invalid data due to a data collection issue. A program revision to address the issue was uploaded to the data logger on February 1, 2017.

Intermittent Monitoring

The results for passive and integrated monitoring of PAH, VOC, PM_{2.5} and PM₁₀ samples were not available in time for submission with this report. These results will be submitted at a later date.

3.0 Monitoring Notes

General Network Notes

The Ammonia (NH₃) analyzer currently operates on a 0 to 2500 ppb operating range with a detection level of 5 ppb in the WBEA network. In data processing, values less than 5 ppb have been considered below detection levels and are reported as zero.

Monitoring notes for the continuous monitoring stations are provided on a station by station basis.

Station 1, Fort McKay - Bertha Ganter

The NH₃ analyzer required additional time to stabilize to levels below ambient concentrations following the automated daily spans and routine monthly multipoint calibrations. Additional time for stabilization after exposure to high concentrations of NH₃ gas is an inherent behavior in the NH₃ analyzer operations resulting from the properties of the NH₃ gas. Data for 1 hour following the daily spans have been reported as invalid for a total of 31 hours this month. Maintenance to reinitiate the daily zero/span check on January 9 interrupted the routine operation of the NH₃ analyzer for 1 hour.

Maintenance and cleaning of the sample manifold on January 5 interrupted the normal operations of all air quality analyzers for 1 hour.

Unstable operation due to negative baseline drift on January 17 affected the normal operation of the PM_{2.5} analyzer for 2 hours. Maintenance on January 17 to verify analyzer zero response affected the routine operation of the PM_{2.5} analyzer for 1 hour.

The daily span of the O₃ analyzer did not meet acceptance criteria ($\pm 10\%$) on January 24. On site investigation and repair attempts required the removal of the analyzer for repairs. A backup analyzer was installed and calibrated and data was invalidated back until the last valid span response on January 23, resulting in 28 hours of invalid data.

Maintenance to reset the data logger on January 24 interrupted the routine operation of the THC analyzer for 1 hour.

Maintenance to confirm calibration points for the O₃ analyzer, based on NO_x GPT reaction, on January 24 interrupted the normal operation of the NO₂ for 1 hour.

The temperature sensors at 2 and 10 m are independent sensors and are not an integrated delta-t system. Although reported values are representative of ambient temperatures, they may not be suitable as measurements of vertical temperature gradients.

Station 2, Mildred Lake

No operational issues to report this month.

Station 3, Lower Camp B - Meteorology

Flat lines in output signals of the sonic wind sensors at 45, 100, and 167 m elevations resulted in 1, 171, and 259 hours of downtime for each respective sensor.

Station 4, Buffalo Viewpoint

No operational issues to report this month.

Station 5, Mannix

Maintenance to the daily zero/span system on January 9 interrupted the routine operation of the H₂S analyzer for 2 hours.

The as found span of the THC analyzer did not meet calibration acceptance criteria ($\pm 10\%$) on January 11. Consequently, data was invalidated back until the last valid span response, resulting in 52 hours of invalid data.

Maintenance to the daily zero/span system on January 12 interrupted the routine operations of all air quality analyzers for 1 to 4 hours.

Maintenance to replace the calibration gas cylinder on January 13 interrupted the routine operations of the THC and SO₂ analyzers for 1 hour.

Flat lines in output signals of the sonic wind sensors at 20, 45, 75 and 90 m elevations resulted in 150, 233, 246, and 188 hours of downtime for each respective sensor.

Flat lines in output signals of the ambient temperature and relative humidity sensors at 20 m elevation resulted in 27 hours of invalid data this reporting period.

Station 6, Patricia McInnes

The NH₃ analyzer required additional time to stabilize to levels below ambient concentrations following the automated daily span and routine monthly multipoint calibration periods. Additional time for stabilization after exposure to high concentrations of the NH₃ gas is an inherent behavior in the NH₃ analyzer operations resulting from the properties of the NH₃ gas. Data for 1 to hour following each daily span has been reported as invalid for a total of 31 hours this month.

Multiple instances of unstable operation due to baseline drift affected the normal operation of the THC analyzer for a total of 15 hours. Collection of diagnostic information on January 20 interrupted the normal operation of the THC analyzer for 1 hour. Maintenance to adjust the carrier gas pressure and recalibrate on January 23 interrupted the normal operation of the THC analyzer for 3 hours. Maintenance to replace the zero air generator and confirm analyzer response on January 31 interrupted the routine operation of the THC analyzer for 2 hours.

Maintenance to reinitiate the daily zero/span check on January 18 interrupted the routine operation of the NO₂ analyzer for 3 hours.

Station 7, Athabasca Valley

Maintenance and cleaning of the sample manifold on January 5 interrupted the normal operation of the TRS, O₃, and CO analyzers for 1 hour.

Maintenance to reinitiate the daily zero/span check on January 17 interrupted the routine operation of the NO₂ analyzer for 2 hours.

A power outage at the station on January 19 affected the normal operation of all air quality analyzers for 1 to 2 hours. The PM_{2.5} analyzer required an additional 2 hours to stabilize following the power outage.

Multiple instances of unstable operation due to baseline drift affected the normal operation of the PM_{2.5} analyzer for a total of 5 hours this reporting period.

Station 8, Fort Chipewyan

An internal WBEA audit on January 17 interrupted the normal operation of all air quality analyzers for 2 to 4 hours.

A power spike at the station followed by stabilization time on January 14 interrupted the routine operation of the NO₂ analyzer for 2 hours.

Maintenance to remove built-up frost from the wind speed and wind direction sensors on January 4 interrupted the normal operations of the wind sensors for 1 hour. Flat-lines in the output signal of the wind sensor resulted in 8 hours of invalid data this reporting period.

The precipitation collector was found to be unresponsive on January 5, 2017 and was removed from site for repairs. Data was invalidated back to the last precipitation event on November 28 resulting in 744 hours of invalid data. The analyzer was re-installed on February 9 following in-shop repairs.

Flat-lines in the output signal of the wind sensor resulted in 8 hours of invalid data this reporting period.

Station 11, Lower Camp

Flat-lines in the output signal of the wind sensor resulted in 1 hour of invalid data this reporting period.

Notes:

As found zero and span showed an imbalance between NO and NOx. Diagnostics do not show a significant difference in pressures or flows between channels. PMT adjustment performed last month and settling in of new station most likely explanation for the imbalance. Zero and span adjustment resolved the issue. Calibration passed. Noted a leak on the NC port on ZS valve that caused some instability with the AL Span, issue resolved and AL Span went well.

Notes:

Sample inlet filter changed and SO2 scrubber test completed after as founds. Bypassed the converter to see how it would respond to SO2 gas; with 200 ppb of SO2 being generated, the analyzer would read 190.3 ppb. The correction factors were very similar between H2S as found span and SO2 gas test. No maintenance being done at this point. Only adjust span.
