Community Programs

RAMP relies on **community findings** in order to augment information obtained through monitoring of the [RAMP components](#). The two community programs currently in place are:

- [Fish Health Program](#)
- [Fish Radio Telemetry](#)

These community programs provide extremely useful information, particularly with respect to regional issues beyond the core field sampling undertaken by RAMP. Public input to RAMP through these community programs is strongly encouraged.

RAMP Reminder: please report any observations of spills, foam, scum, turbidity and other events (which may or may not be due to natural causes) to Alberta Environment and Sustainable Resource Development at 1-800-222-6514.
